

## “Infrared Inspection Windows” for high voltage equipment

### See picture A

The “infrared inspection windows” are designed to increase safety by not exposing employees to live equipment.

### See picture B

Fitted with a quick twist cover that magnetically sticks to the panel when removed.

### See picture C

From a safe viewpoint the windows cut down the time and the number of technicians needed to conduct inspections.

## Continuous Improvement – Ensco 102

- Proactive early monitoring of systems before failure occurs.
- Ideally suited for visual and thermo graphic surveys on transformers, SCR's and generators.
- Non invasive inspections reducing the risk of electrocution and triggering an arc flash over.
